

Managing your Building Maintenance

Fire and Emergency Services Act Section 104D requires occupiers of buildings to maintain prescribed fire safety installations.

When was your Passive Fire Penetrations last inspected?

Engaging Subcontractors Upgrades

Are the contractor's that are coming through your building reinstating passive fire protection to ensure your building remains compliant?

What measures are in place to ensure this?

SPECIALISTS PROTECTING YOU

Olympic Fire Services have the knowledge base and expertise to assist you with maintaining your passive fire protection and monitoring works completed by subcontractors.

Are you up to speed?

The NBN run out has seen a huge increase in new services being installed but not sealed correctly. Sadly, these trades are not being monitored correctly in most properties and could be putting yourself and your building at risk!

When things start to heat up

Should the worst ever happen, we need to ensure you, your tenants and the public are protected.

We like to think the worst would never happen, so we work to ensure the correct measures are in place, as per required legislation, to ensure your building and its fire protection are fit for purpose and up to date.

What does your building look like?

Where do I start?

Right here. Right now.

Is your building's Passive Fire Protection currently being maintained?

Has Telstra, NBN or any other trades recently been through your building?
